

## BT6270: Computational Neuroscience

The details of Assignment-3 are given below

### Assignment description:

Calculate the coupling coefficients ( $w_{12}$  and  $w_{21}$ ) required to achieve a given phase difference in the between the oscillators. Two types of coupling are to be considered –

a. Complex coupling

The phase differences to be achieved are  $-47^\circ$  and  $98^\circ$ . Consider  $\omega_1 = \omega_2 = 5$ .

b. Power coupling.

The *normalized* phase differences to be achieved are  $-47^\circ$  and  $98^\circ$ . Consider  $\omega_1 = 5$  and  $\omega_2 = 15$

Hopf oscillator equations are given as follows,

$$\dot{x} = -y + \mu x(1 - x^2 - y^2)$$

$$\dot{y} = -x + \mu y(1 - x^2 - y^2)$$

In polar coordinates, the equations become,

$$x = r \cos \theta, y = r \sin \theta$$

$$\dot{r} = \mu r(1 - r^2)$$

$$\dot{\theta} = 1$$

Plot the response of the oscillators over time for all the cases. Kindly attach the codes used along with any helper modules or functions used to run the code, along with a report containing a summary of your findings, and/or calculations along with the necessary plots. The code can be either in **MATLAB or Python**.

### General Instructions:

- Please email the TAs the completed assignment (zip or rar file named <ROLLNO>\_A3.zip) with the subject: “ BT6270: Assignment - 3”. The email IDs of the TAs are given below,

Sayan Ghosh - [sayanghoshbme@gmail.com](mailto:sayanghoshbme@gmail.com)

Sundari Elango – [bt18d202@smail.iitm.ac.in](mailto:bt18d202@smail.iitm.ac.in)

- Please note this is an individual assignment. Please do not share your assignment with other students.

**Please note the deadline for Assignment-3 is 08/11/2023, 23:59. Delay in submitting the assignment will only be accepted if found valid and should be informed to one of the TAs at least 3 days before the due date.**
